

Window Tinting

AutoGard Premium Metallised Film

AutoGard Premium Metallised Window Film (with a matching carbon equivalent for those windows that have radio antenna) is part of every AutoGard Platinum and Gold Protection Pack.

AutoGard high performance film has a VLT (Visible Light Transmission) of 35% (which is the darkest legal film), rejects 99% of UV, 45% of heat rejection, and 65% glare reduction.

The Benefits of AutoGard Window Tinting

AutoGard Window Film offers many benefits to vehicle owners and occupants.

1. AutoGard Window film reflects more than 99% of UV light. Protecting the vehicle occupants from UV light reduces the incidence of skin cancers, and "sun" damage to the eyes.
2. In a vehicle accident, AutoGard window film holds broken glass together, which reduces the risk of injury to occupants from small pieces of broken glass from scratching the face or other exposed areas, or from scratching the surface of the eyes.
3. AutoGard film reflects Infra Red radiation (heat), which makes the car interior a more comfortable workplace. AutoGard Premium Metallised Film reflects as much as 45% of IR, but AutoGard Nano Ceramic film reflects a massive 60%!
4. Protects seat fabrics against fading from the sun.
5. Makes your car look great!
6. Improves re-sale value.
