

Reverse Sensors

ParkAssist Parking Sensors

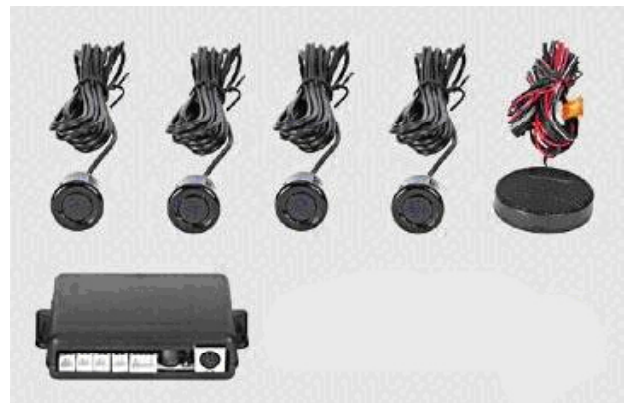

Most modern cars have poor rearward visibility. Blind spots exist even on the best-designed vehicles, with 4WD's and vans contributing to the majority of driveway incidents resulting in injury and in some cases death to pets and small children. Apart from the obvious safety advantages, financially the **PARKASSIST Reversing Aids** will pay for themselves if they prevent you from having just one accident, as regardless of your insurance, there is always that "excess" on your policy.

The PARKASSIST Reversing Aids can be fitted to any vehicle, making parking easy especially for those with impaired mobility such as neck or back injuries.

All sensors are painted in matching colour prior to fitting.

For rear sensors, an additional screen is available to display the distance remaining to objects.
